* Difference between Professional and Ultimate

If you have a lot of Azure groups and the users in Azure are often a member of multiple groups, you probably want to go for the Ultimate license. Net2 can work with advanced access levels, but these can not contain access levels that contain the same doors. However, the Ultimate license provides functionality that combines access levels in such a way that the 'same door' restriction is not a problem. This means you don't have to worry about conflicts, because the software will dynamically create merged access levels where needed.

Because this concept of 'merged access levels' can be a bit hard to understand, we have created a [simple example](#) to help you understand this concept.

Custom Net2AzureSyncServer

The Net2AzureSyncServer application has a lot of features, but maybe you are missing something that is specific for your organization. If so, please contact us about your wishes for the Net2AzureSyncServer and we can probably work something out.

Merged access levels

John

John is a member of security group 'Men_Access' in Active Directory

John has the access level 'Men_Access' in Net2

John

John gets a job as a janitor.

John now needs access to the restrooms for men, but also for women.

John needs an access level, which is a combination of 'Men_Access' and 'Women_Access'.

Professional

A new security group and a new access level are required for the new access right for a janitor.

John is a member of security group 'Men_Women_Access' in Active Directory

John has the access level 'Men_Women_Access' in Net2

Ultimate

John is a member of security group 'Men_Access' and 'Women_Access' in Active Directory

An advanced access level is automatically created in Net2

John gets the automatically created access level in Net2
